SUMMARY

Web, mobile, CLI, npm packages, browser extensions. Shipped across all of it, solo and in teams, with real users on the other end. The apps are live and the code is in production. Open to software engineering internships.

PROJECTS

Vizzible - [vizzible.vercel.app](#) *React, Express, MongoDB, GitHub OAuth*
One link that shows your GitHub, Codeforces, and LeetCode activity together, with heatmaps, streak tracking, and a shareable profile page. The server caches all three upstream APIs and refreshes them in the background so the page loads instantly regardless of which source is slow.

Trackify - [trackify.arbasil.me](#) *React, Node.js, pdf-parse*
Upload your mark sheet and get your CGPA and credit breakdown without typing anything in. Built with a three-member team; uses **pdf-parse** to extract grade data from unstructured PDFs; reached 1k+ users and delivered 2,000+ notification emails.

GitRid - [gitrid.vercel.app](#) *React, TypeScript, Express, MongoDB, JWT*
Delete or change the visibility of up to 50 GitHub repos at once from a searchable table, instead of doing it one by one. Batches **OAuth** API calls 10 at a time to respect rate limits while keeping execution parallel; each repo reports success or failure individually.

Echo - [echo-job.vercel.app](#) *React, Node.js, Express, MongoDB, Gmail API*
Connects to your Gmail and builds a job application timeline automatically, so you always know where each application stands. Uses **Groq API** to parse unstructured email text and extract company, role, and stage without any templates or manual rules.

Transport App (Polaris) - *In development* *React, Node.js, TypeScript, PostgreSQL, Flutter*
Tracks campus buses in real time: students see a live map, drivers share their location from a dedicated Android app. The auth system covers **OTP** verification, invite links, and bulk CSV onboarding; the admin dashboard manages drivers and students, and the **SSE** stream is load-tested.

EXPERIENCE & FREELANCE

Full Stack Developer - [Tech Society](#) (*college club*) Aug 2025
Sole developer of the club's internal platform for signups, events, and project tracking. Designed the data model and shipped **RBAC** with email-verified onboarding.

Freelance Developer - [Alpana Tech](#) Feb 2025
Paid engagement: delivered a production marketing site for a US client alongside a senior developer. Built the animated front end in React and **Framer Motion**; shipped on time and remains live.

NPM PACKAGES & EXTENSIONS

vizz-init - Scaffolds an Express + **TypeScript** backend with folder structure, middleware, and lint config in one command. (*700+ downloads*)

LeetCode CMD+K - Command palette that inserts Java and C++ snippets into the LeetCode **Monaco** editor with a single keystroke.

JustResults - Blocks CSS, images, and JS on search result pages; cut load time from **959 ms to 352 ms**.

CodeFocus - Embeds a **Monaco** editor into any Codeforces problem page with a sample-case runner and one-click submit, so you never leave the tab.

SKILLS

JavaScript, TypeScript, Go, Python, Java, SQL, HTML, CSS, React, TailwindCSS, Astro, GSAP, Node.js, Express, REST APIs, OAuth, Bun, Flutter, MongoDB, PostgreSQL, Docker, Azure, Cloudinary, Appwrite

EDUCATION

B.Tech in Artificial Intelligence and Machine Learning 2023–2027
Saveetha Engineering College CGPA: 8.26
